Wacom Signature Solutions+ Edatalia

Together, Wacom and Edatalia deliver a powerful, end-to-end biometric signature solution that enables organizations to eliminate paper, accelerate workflows, and ensure full legal compliance.

Trusted by enterprises and government institutions worldwide, this joint solution combines industry-leading hardware with advanced biometric signature software to support secure, high-volume digital transactions.

Use Cases

Government & Public Administration. Modernize constituent services and eliminate paper-based workflows by digitizing administrative files, resolutions, and procedures. This approach enables secure signatures for both constituents and officials while significantly reducing processing times and improving overall operational efficiency.

Banking & Insurance. Enhance customer experience while maintaining full regulatory compliance by streamlining customer onboarding and enrollment processes. Enable efficient execution of financial contracts, policy agreements and mandates through secure digital workflows. At the same time, ensure that every transaction is captured as a secure, auditable record, providing transparency and accountability across all operations.

Human Resources. Simplifies employee documentation and internal processes by digitizing employment contracts and onboarding workflows. Enables efficient tracking and acknowledgment of PPE delivery while streamlining employee requests and internal forms. This approach supports the full digitization and HR workflows, improving efficiency, accuracy, and overall employee experience.

The Challenge

Organizations across industries face increasing pressure to modernize document workflows while maintaining compliance and security. Common challenges include:

- Paper-based inefficiencies slowing down operations and increasing costs
- Regulatory complexity requiring legally binding, verifiable signatures

- Security risks tied to document tampering & identity fraud
- Fragmented systems make integration & scaling difficult
- High transaction volumes that demand reliable, enterprise-grade performance

The Solution

Wacom and Edatalia deliver a fully integrated biometric signature ecosystem designed to address these challenges.

The solution ensures end-to-end security by capturing biometric signature data and securely embedding it within each document. Documents are encrypted and sealed with a digital certificate, preventing any post-signature modifications.

It also supports verified authorship through advanced biometric analysis, enabling reliable signature validation for legal enforceability.

Built for flexibility, the solution integrates seamlessly with Wacom signature devices and can be deployed via web, API, or client-server architectures, either on-premises or SaaS.

Why Wacom for Business?

Wacom for Business devices are sleekly designed, modern and ultra durable, ensuring the lowest total cost of ownership in the market today. Features include:

- A range of screen options to meet your workflow needs, including compact signature pads and larger interactive pen displays.
- A cordless, battery-free digital pen that never needs to be charged.
- Flexible deployment options that work with Windows, MacOS, Linux and web-based options.
- Best-in-class customer support before & after purchase.
- Extended SDK library including the Verification SDK and the Multi-Monitor SDK.
- Little to no downtime due to device failure (< 0.05%/yr on average).
- Industry leading 3-year standard warranty and a 5-year extended warranty (sold separately – USA only).

STU-540 Color Signature Pad

Durable signature capture ideal for countertops, desks and kiosks.
